

Rugged Design & Simple Operation

Allowing for heavy use at the instructional level

- Polarimeters are used to measure the purity of ingredients in pharmaceuticals, quality control of raw materials, and concentration of ingredients in sugar-based substances
- The model C25L Polarimeter is designed to measure the angle of rotation caused by passing polarized light through an optically active substance
- Adjustable eyepiece brings the 2 half shadows of your sample into sharp focus
- When the 2 half shadows are viewed, right-side shading indicates a dextrorotatory sample and leftside shading indicates a levorotatory sample
- With the Vernier scale, rotations can be measured to an accuracy of $\pm 0.1^\circ$
- Includes 100 mm and 200 mm sample cells with bubble trap
